Product Description

Zirc E-Z ID Tape and Rings are products intended to be placed onto dental instruments for color code identification and organization. They are available in various sizes and colors compatible with Zirc's Color Method storage and workflow efficiency system.

Specifications (size)

E-Z ID Tape products consist of adhesive-backed tape in either 3' or 10' lengths pre-loaded on a dispenser with built-in cutter. E-Z ID Rings products are silicone rings provided on a dispenser. Rings are available in three sizes:

- SM – fits instruments 4mm-7.4mm in diameter
- LG – fits instruments 5.1mm-8.6mm in diameter
- XL – fits instruments 7.1mm-12.7mm in diameter

Storage & Handling Parameters

Keep Dry

Keep Products away from light sources

Do not use and if packaging is damaged or unintentionally opened prior to use

Use Instructions

Prior to application of E-Z ID Tape or Rings, ensure instrument is sterilized and free of any debris and oils, especially where intending to place the band or tape. If instruments are cleaned with oil prior to placing E-Z ID Tape, the tape my not adhere to the instrument.

To apply E-Z ID Rings, insert the shank of the instrument as far into the ring band as possible, keeping mind to avoid placing hands and fingers near sharp ends/edges. Place a thumb or finger on the ring band to secure it and pull away from the dispenser. Once the ring is released, use thumb and fingers to roll the ring band to the middle of the instrument handle.

To apply E-Z ID Tape, dispense a small piece, place a thumb or finger over the dispenser platform and pull the tape across the cutter at an angle to cut. Press the tape around the handle of the instrument.

E-Z ID Tape and Rings are reusable when reprocessed per the instructions below.

Cleaning, Packaging, & Sterilization Instructions

Restriction of Reprocessing: Frequent reprocessing has marginal consequences for E-Z ID Tape and Rings products. Normally, the end of durability of the product will be determined by visual degradation. Discontinue use if product has visibly degraded.

Packaging: Package product in a legally-marketed, self-seal pouch or wrap.

Cleaning: E-Z ID Tape and Rings products are compatible with Ultrasonic, Instrument Washer, and Thermal Disinfector equipment. Follow the equipment manufacturer's directions for proper cleaning and use a PH neutral detergent only. Rinse products with demineralized water to remove detergent or articles.

Sterilization: The following reprocessing parameters have been demonstrated to safely reprocess E-Z ID Tape and Rings products when used with legally marketed, self-seal pouches as a sterile barrier system:

- Dynamic air-removal (prevacuum) conditioning; 4-minute, 132 ºC (270F) exposure; 30-minute dry time
- Dynamic air-removal (prevacuum) conditioning; 3-minute, 134 ºC (273F) exposure; 30-minute dry time
- Gravity-displacement conditioning; 30-minute, 121 ºC (250F) exposure, 30-minute dry time

E-Z ID Tape and Rings products are provided non-sterile.
Follow the sterilizer manufacturer's directions for proper sterilizer operation.
Do not heat above 136 ºC (277F).
Do not dry heat sterilize.
