maxill Diamond SS

Finishing Strips

4.0 mm

These single-sided diamond stainless steel strips are used for finishing and polishing interproximal faces. With a neutral (non-abrasive) centre, this strip is easily placed between teeth for finishing and polishing, without affecting the contact. Available in fine, medium, and coarse grit, each strip has a colour coded end for quick and easy identification.

maxill Diamond SS

Perforated Strips

4.0 mm

These single-sided perforated abrasive strips are designed to smooth and polish tooth enamel or restorative material. With a neutral (non-abrasive) centre, this strip is easily placed between teeth without affecting the contact. The perforations allow debris to move freely and avoid residue accumulation.

maxill SS

Serrated Full Saw Strips

The serrated stainless-steel strip is non-abrasive and commonly used to separate fused contacts and debride them of composites and cement. These strips can also assist in post-cementation procedures of crowns, veneers, bridges, inlays or onlays, allowing for easy removal of excess cement or unwanted materials.

maxill SS

Finishing Strips

This single-sided stainless-steel electroplated finishing strip is used for finishing restorations and polishing interproximal surfaces. The smaller 2.5mm width and neutral, non-abrasive centre, allows these strips to ease between tight areas of teeth for precise finishing and polishing, without affecting the contact.

maxill xacto stripz sawz

Interproximal Reduction Strips

The autoclavable xacto stripz sawz interproximal reduction (IPR) system has many uses such as orthodontic contact reduction, interproximal finishing and for removal of excess cements and restorative materials. It has a sequence of five strips - one saw and four abrasive strips for a gradual reduction. These can be used on their own manually or with the autoclavable handle, designed to hold the strips at 180 degrees or 45 degrees.
