maxchek> Backflow Prevention Valves

These unique, one-way autoclavable valves prevent backflow from the saliva ejector into the patient's mouth by closing off airflow when the suction is blocked or restricted. maxchek is inserted into the SE valve and holds the saliva ejector without affecting its performance.

maxill Diamond SS

Finishing Strips

4.0 mm

These single-sided diamond stainless steel strips are used for finishing and polishing interproximal faces. With a neutral (non-abrasive) center, this strip is easily placed between teeth for finishing and polishing, without affecting the contact. Available in fine, medium, and coarse grit, each strip has a color coded end for quick and easy identification.

maxill Diamond SS

Perforated Strips

4.0 mm

These single-sided perforated abrasive strips are designed to smooth and polish tooth enamel or restorative material. With a neutral (non-abrasive) center, this strip is easily placed between teeth without affecting the contact. The perforations allow debris to move freely and avoid residue accumulation.

maxill SS Serrated Full Saw Strips

The serrated stainless-steel strip is non-abrasive and commonly used to separate fused contacts and debride them of composites and cement. These strips can also assist in post-cementation procedures of crowns, veneers, bridges, inlays or onlays, allowing for easy removal of excess cement or unwanted materials.

maxill SS Finishing Strips

This single-sided stainless-steel electroplated finishing strip is used for finishing restorations and polishing interproximal surfaces. The smaller 2.5mm width and neutral, non-abrasive center, allows these strips to ease between tight areas of teeth for precise finishing and polishing, without affecting the contact.
