maxill u·test JUMBO PCD

Process Challenge Device for Sterilization Monitoring

Blue Purple Pink Teal

A Process Challenge Device (PCD) is a crucial component in the quality assurance testing of dental office sterilizers. It is designed to help monitor the effectiveness of the sterilization process. The PCD simulates a challenge equal to or greater than the most difficult instrument or item routinely processed during a sterilization cycle.

Using the **maxill u•test JUMBO PCD** provides a more rigorous approach to testing and adheres to best practices in risk management, aligned with the principles of infection prevention and control in routine practice.

Simulates the most difficult instrument within the sterilization load.

Manufactured with lightweight, durable aluminum and lasts for an unlimited number of cycles without a change in performance.

Easy-to-use, consistent, reproducible challenge.

Jumbo size fits larger BIs and CIs that may not fit in the standard size u•test PCD.
Inner diameter: 26 mm
Inner length: 76 mm
