

ReLeaf[®] High Volume Suction Device

ReLeaf is a hands-free HVE suction device that connects seamlessly to existing dental vacuum systems, delivering continuous 280-degree suction and a reliable dry field. ReLeaf allows the clinician to work comfortably in all four quadrants with a full view of the oral cavity. It's perfect for use during general dentistry and hygiene procedures, restorative procedures, endodontics, periodontics, and more!

Made from a custom blend polymer, the ReLeaf is latex-free, BPA-free, and is soft and comfortable for patients. ReLeaf can help minimize aerosol risk and risk of backflow. ReLeaf is available in both a standard size and a mini option tailored for smaller arches.

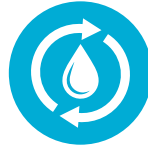

Cleaner, Drier Procedures

Less Chair Time

Built for Patient Comfort

Complete Fluid Control
